INTRODUCTION

1. ACTIVE SYSTEMS	
1.1. Active systems – introductory remarks	
1.2. Notions and criteria of problem-resource analysis	
1.2.1. Problem	
1.2.2. Resources	
1.2.3. Goals	
1.3. Elements of theory of individual utility	
1.3.1. Binary relations, ordering	
1.3.2. Determinate utility	
1.3.3. Expected utility	
1.4. Further analysis of the fundamental notions.	
1.4.1. Problem-resource situation	
1.4.2. Situational dynamics	
1.4.3. Dynamics of sets and derivative with respect to measure	
1.4.4. Dynamics of sets and moments problem	
1.4.5. Different sets of states	
1.4.6. Properties of simple alternatives	
2. INDIVIDUAL OBJECT PREFERENCES	
2.1. Individual functions of preference, state, composition, strategy	
2.2. Preference functions at the set of simple alternatives and their normalization	
2.3. Normalization of complex alternatives preferences	
2.4. Hypothesis of factorization	
2.5. Analogy to distributions of probabilities. About the algebra of alternatives	
2.6. Axiomatic approach to preference functions	
2.7. About preference functions for a discrete set of alternatives S_a	
2.8. Elements of theory of categories and its application to an analysis of active systems	
2.8.1. Introductory remarks	
2.8.2. The definition of category	
2.8.3. Correspondences and mapping	
2.8.4. Cardinal structure of sets, cardinal numbers, invariants	
2.8.5. Invariants and variation principle in the theory of categories	
2.9. Jensen inequality for ordered sequences	
2.10. Subjective probability and expected utility	
2.10.1. Relative probability	
2.10.2. Objective utilities and subjective preferences	
3. SUBJECTIVE ENTROPY OF INDIVIDUAL PREFERENCES.	
VARIATION PRINCIPLE. SUBJECTIVE INFORMATION	
3.1. Subjective entropy	
3.2. About non-one normalizations	
3.3. Analogies to Shannon entropy	
3.4. Subjective information. Entropy of ways	
3.5. Variation principle. Canonical distributions of preferences for a discrete set of alternatives	
3.6. Mixed type variational problems	
3.7. On the threshold values of entropy, the moments "of switching" of distributions of preferences and "the moments of selection"	

3.8.	Entropy of ordinal distributions of preferences.....	
3.9.	Two optimization tasks: optimization of utilities and optimization of preferences	
4.	GROUP OF SUBJECTS. FUNCTIONS OF RATING PREFERENCES.	
	AGGREGATION OF PREFERENCES	
4.1.	Problems, related to subjective analysis of a group of interacting subjects.....	
4.2.	About ordinal theory of corporative decisions. Theory of aggregate utility	
4.3.	Group of interacting subjects. Preferences functions of the 2 nd kind.....	
4.4.	Individual ratings. Functions of group effectiveness	
4.5.	Ratings and ranks. "Well"-organized groups.....	
4.6.	Mutual utilities	
4.7.	Consolidation of resources in group	
4.8.	Aggregation of rating preferences	
4.8.1.	Aggregation of individual ratings.....	
4.8.2.	Ratings of subgroups of subjects	
4.9.	Notion of "problem" referred to a set of ranks	
4.10.	Stable imperatives. Brief survey of ethics	
4.11.	Stable imperatives in schemes of subjective analysis.....	
4.12.	One more time about "virtual subject"	
4.13.	Laws of supply and demand as the result of the action of the entropy principle of optimality.....	
4.14.	Cost of subjective information	
4.15.	Aggregation of preferences in crew of the two pilots.	
5.	DYNAMICS AND INTER INFLUENCE OF PREFERENCES	
5.1.	Problems of the analysis of dynamics and mutual influence of the preferences.....	
5.2.	Basic problems types of the preferences dynamics	
5.3.	Exogenous dynamics of the I type preferences.....	
5.4.	Reciprocal effect of the individual preferences in the group.....	
5.5.	A priori and a posteriori preferences of the I type. "The chains of distributions"	
5.5.1.	Accounting of the influence of a priori preferences	
5.5.2.	The canonical distributions of the I type preferences expressed through the „speeds“ of the resources conversions	
5.6.	Models of endogenous dynamics of the active systems	
5.7.	Simulation of the preferences dynamics of the first kind and exogenous processes	
5.7.1.	Dynamics of the consumer's preferences by the exogenous model of Walras – Leontyev	
5.7.2.	Dynamics of the preferences of consumer and producer with the Walras- Leontyev's exogenous model.....	
5.7.3.	Model of the appearance of the stress states of the consumer	
5.8.	Elasticity and rigidity of preferences – elasticity and the rigidity of psychics. Sensitivity of preferences.....	
5.9.	Alternation of the problem- resource situation in the course of decision making on the self of alternatives	
5.10.	Ratings dynamics. Joint dynamics of the preferences of I and II type	
5.11.	On a change in the number of alternatives	
5.12.	"Manipulation on consciousness" – dynamical process of preferences modifications	
5.13.	Some additional tasks.....	
5.13.1.	Beast- victim -hunter.....	
5.13.2.	On the models of advertising campaign.....	
5.13.3.	Auto-relaxation of the preferences distributions.....	
5.13.4.	Complete Walras - Leontev model, including preferences of consumer and producer.....	
5.13.5.	Competition of ideas. One model of the sociodynamics	

6. SAFETY OF THE ACTIVE SYSTEMS	
6.1. Approach to a study of the active systems safety	
6.2. "Dangers" and "threats"	
6.3. Flight safety and the subjective analysis	
6.4. Probabilistic flight models. Combining of the probabilistic and subjective analysis.....	
7. CONFLICTS, COGNITIVE DISSONANCE, SUBJECTIVE FREEDOM	
7.1. Conflicts from the point of view of the subjective analysis	
7.2. Model characteristics of the internal conflict	
7.2.1. Utilitarian internal conflicts	
7.2.2. Internal ethical conflicts.....	
7.3. Model characteristics of the intersubject conflict.....	
7.4. Entropy map	
7.4.1. On the quantization of the preferences.....	
7.4.2. What is an entropy map?	
7.5. Category „freedom“ from the point of view of subjective analysis. Brief historical excursus.....	
7.6. Evolution of the conflicts	
7.7. Dynamics of the „living points“
